Projects

"Cueva Multiple Services"
Desktop App
Desktop applications created to manage companies, you can add bought and sold products, you can also manage the users who access the system with a special window to manage their privileges in it. You have the option to generate virtual invoices and finally, a screen to generate reports on everything related to the system.

Developed with: Java, MySQL.

"Geo Coffee App"
Mobile App
Mobile application that fulfills the same functions as Cueva Multiple Services, with the difference that it is adapted and optimized for mobile devices.

Developed with: Kotlin, Firebase.

"Honduran Legal Library"
Web App
Web application developed to allow the Honduran population to access the existing laws in the country, inspired by the BOE platform of the Spanish government. It contains an internal OCR that is capable of detecting text in images and generating a pdf file where said text can be selected.

Developed with: JavaScript, PHP, Bootstrap, PL-SQ, React.js, Node.js.

"Honduran Vote"
Web App
Web application developed for the master's thesis, its main purpose is to create an online voting system, its main idea is to do it through a blockchain.

Developed with: NEAR Wallet, Node.js, React.js, TypeScript.
